

# **CNS: An Integrated Vision for the Future**

*“2<sup>nd</sup> Integrated CNS Technologies  
Conference & Workshop”*

**April 30- May 2, 2002  
Vienna, VA**

**K. (Gus) Martzaklis  
NASA Glenn Research Center  
Cleveland, OH 44135  
(216) 433-8966  
[k.martzaklis@grc.nasa.gov](mailto:k.martzaklis@grc.nasa.gov)**

# Aviation Gridlock

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

## Demand for Transportation

***Demand is growing...***

***Delays are climbing...***

Total US Air Traffic Delays (1997-2000)

# The Capacity & Safety Challenge

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

## *Air Traffic to Triple in Next 20 Years*

### Technology Objectives:

- Double the capacity of the aviation system within 10 years and triple it within 25 years
- Reduce the aviation accident rate by a factor of 5 within 10 years, and by a factor of 10 within 25 years

*The current air traffic management system is near its capacity limits with extensive system delays and inefficiencies resulting in annual losses to users estimated at over \$4.5B.*

# Some Key Reasons Why

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

- Operational Issues
  - Labor-intensive, manual Air Traffic Control (ATC)
  - Minimal automation
  - Inflexible airspace procedures
  - Ultimately limited by air traffic controller workload
- Infrastructure Issues
  - Dated **communications, navigation and surveillance systems**
  - Limited number of runways (at major hubs)
- Other factors
  - Extremely conservative community (slow to change)
  - Highly complex operations ( most complex in the world)
  - Large number of stakeholders (difficult to reach consensus)
  - Regulatory issues (environmental, certification, political...)

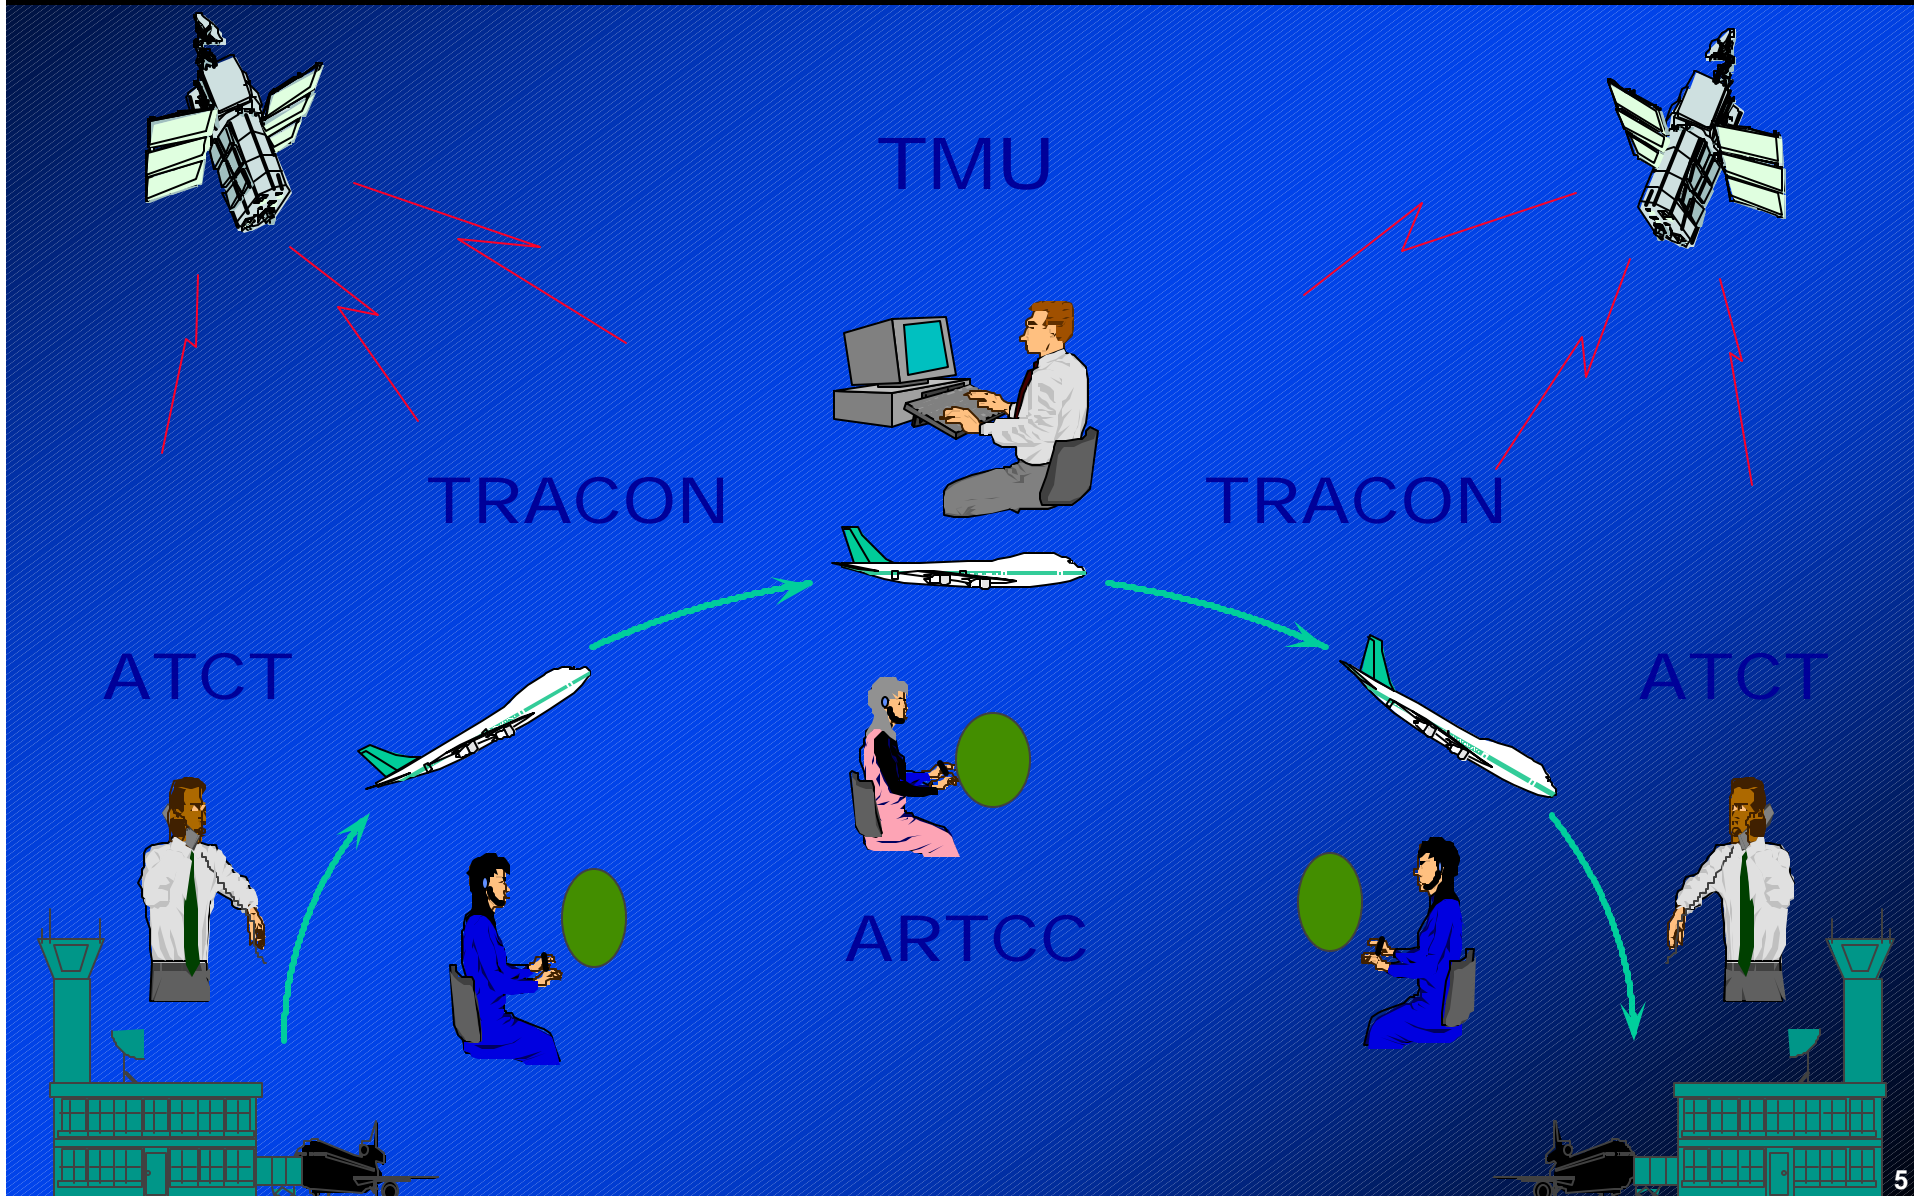

# Air Traffic Control System

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

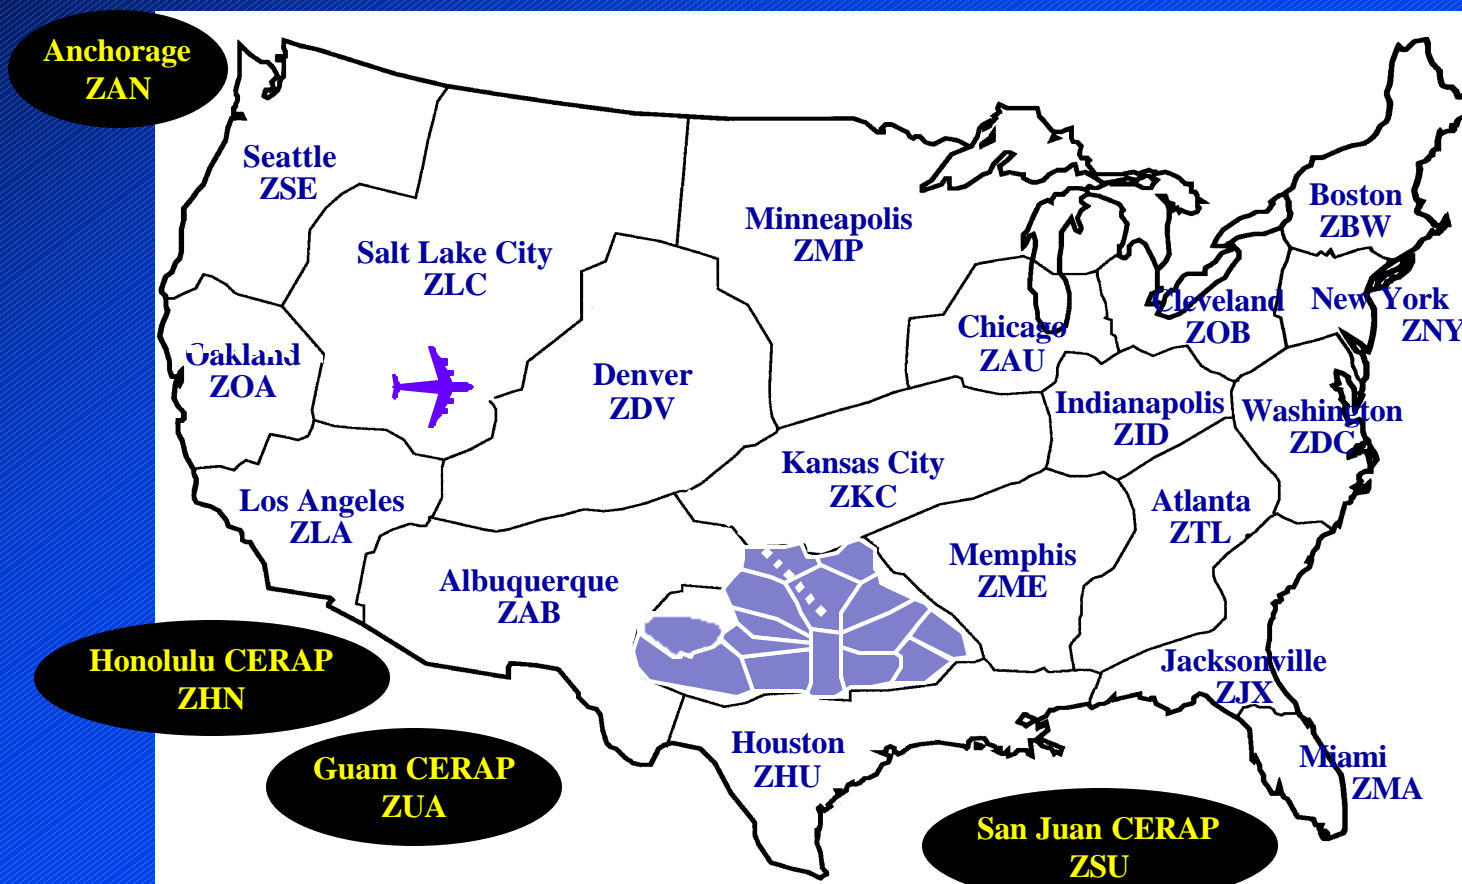

# Air Traffic Control Centers

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

*A typical flight across the US crosses 7 ATC Centers and communicates with over 25 air traffic controllers*

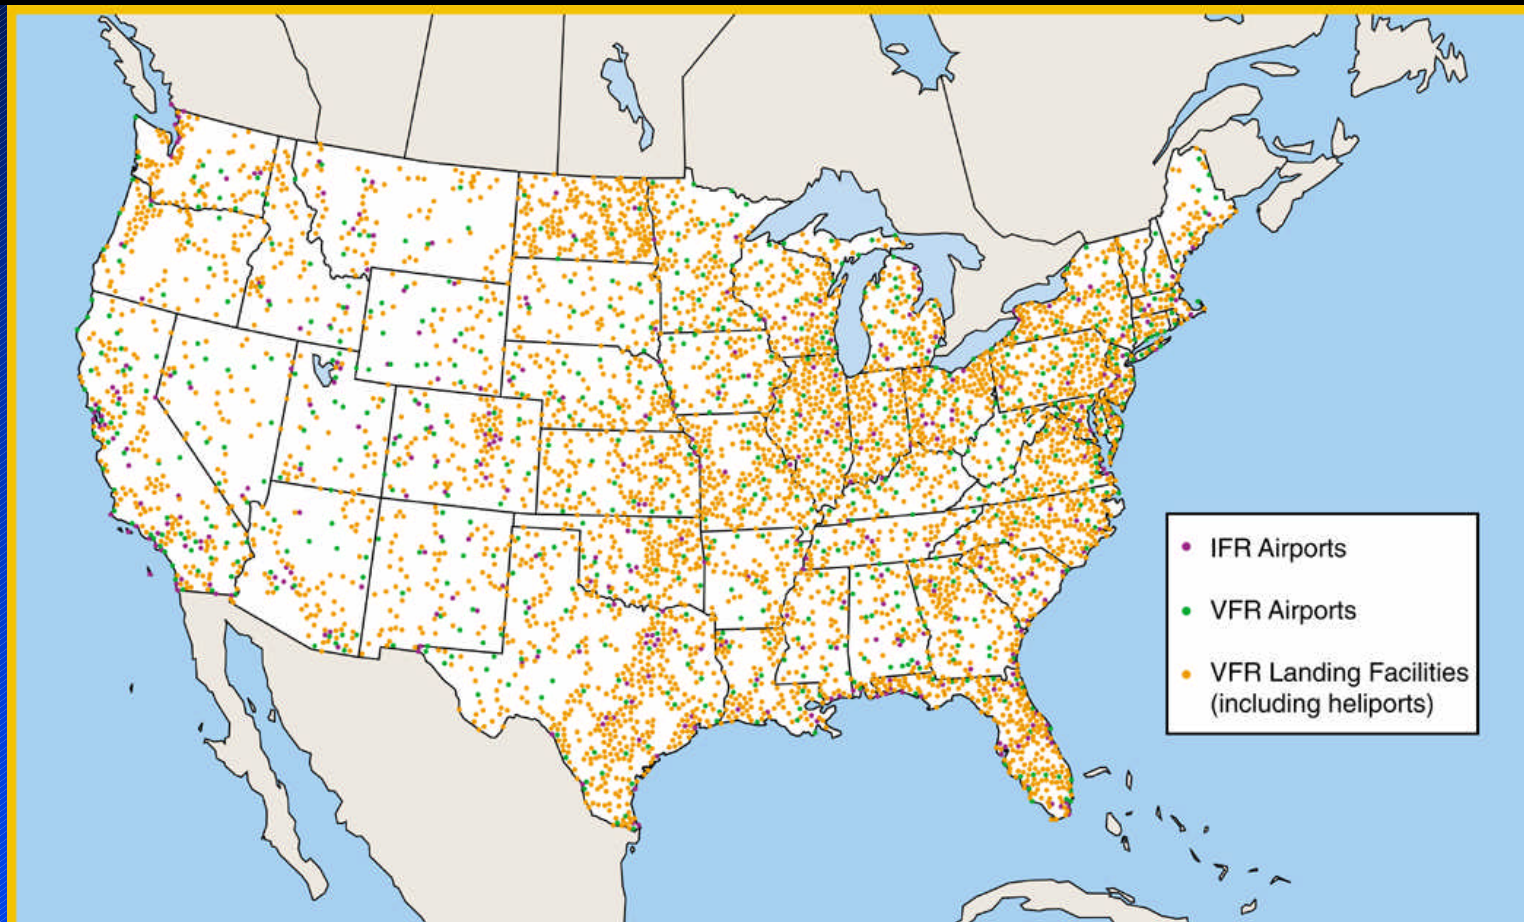

# Limitations: Hub & Spoke Ops & Legacy Infrastructure

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

5400 Public Use Airports

715 Airports with Precision Instrument Approaches (ILS)

→ **Top 64 Hub Airports Enplane 80% of all Passengers**

# Current Communications, Nav & Surveillance (CNS)

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

- Communications
  - Analog voice
  - 25KHz channels, double sideband AM Radio
  - In protected aeronautical comm VHF band (118-137 MHz)
- Surveillance
  - Radar-based, 'independent' surveillance
    - Primary and secondary surveillance radars
    - Airport surface radars
  - Airborne transponder for controlled airspace (ID tag & altitude)
- Navigation
  - Ground-based navigational aids
    - VHF Omnirange (VORs), Distance Measuring Equipment (DME)
    - In protected aeronautical navigation VHF band (108-118 MHz)

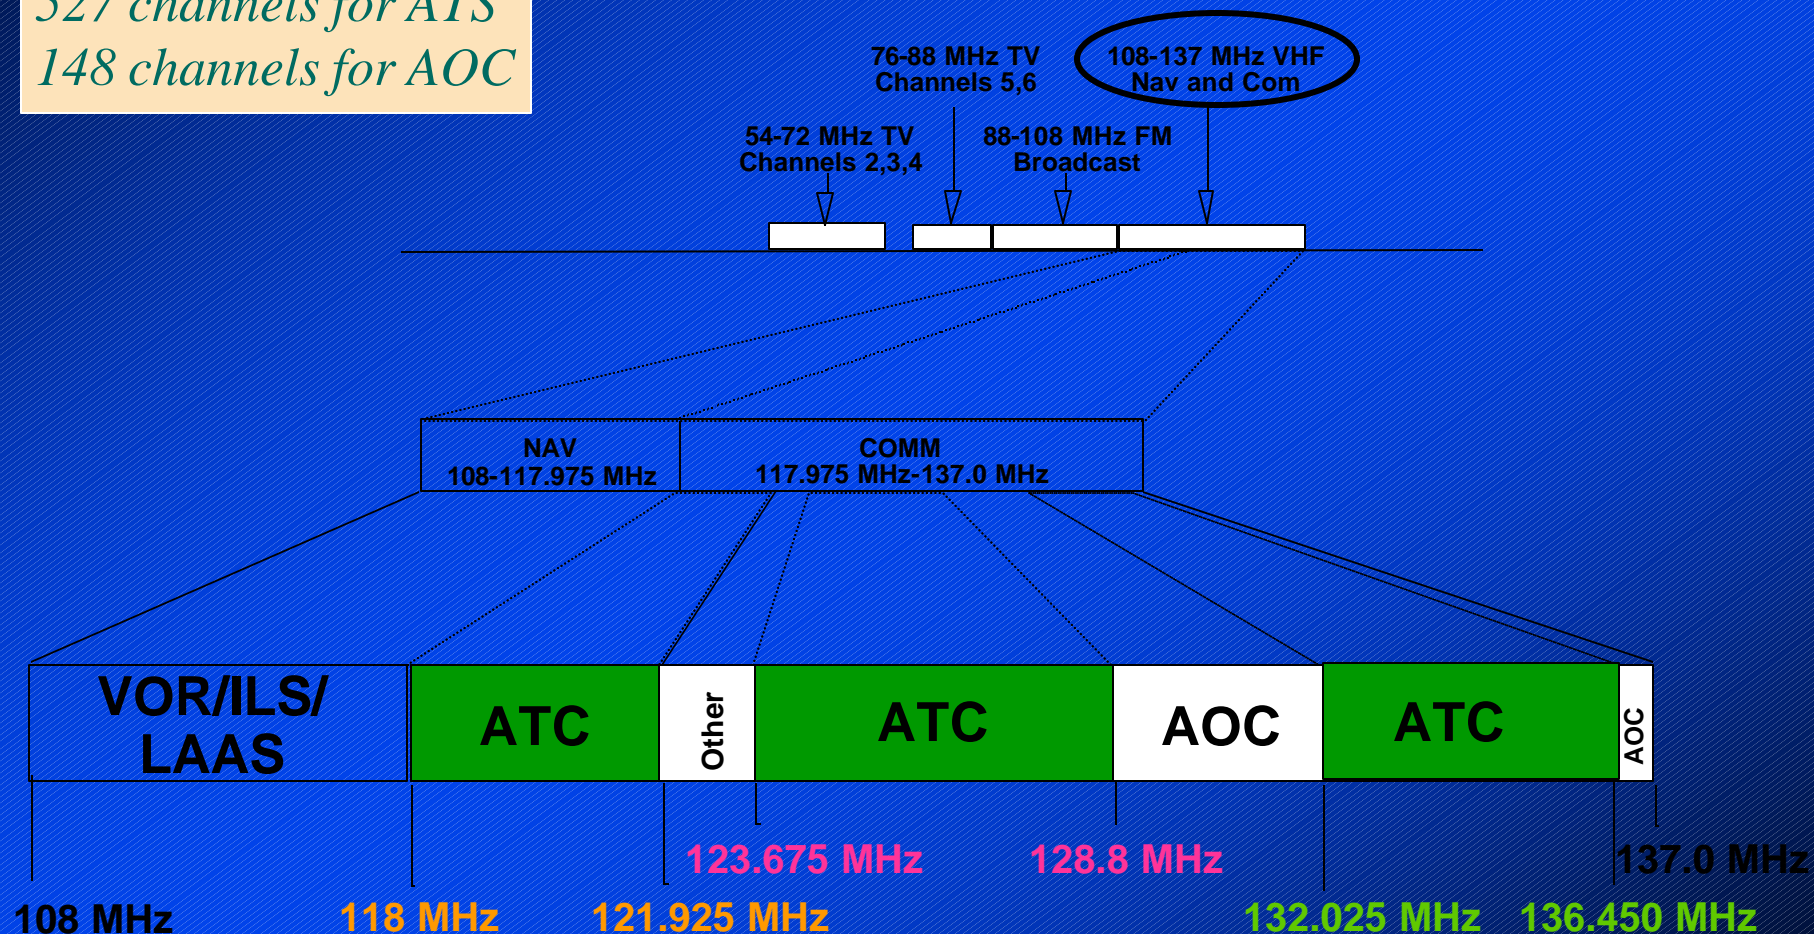

# Current Aero VHF Spectrum

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

*527 channels for ATS*  
*148 channels for AOC*

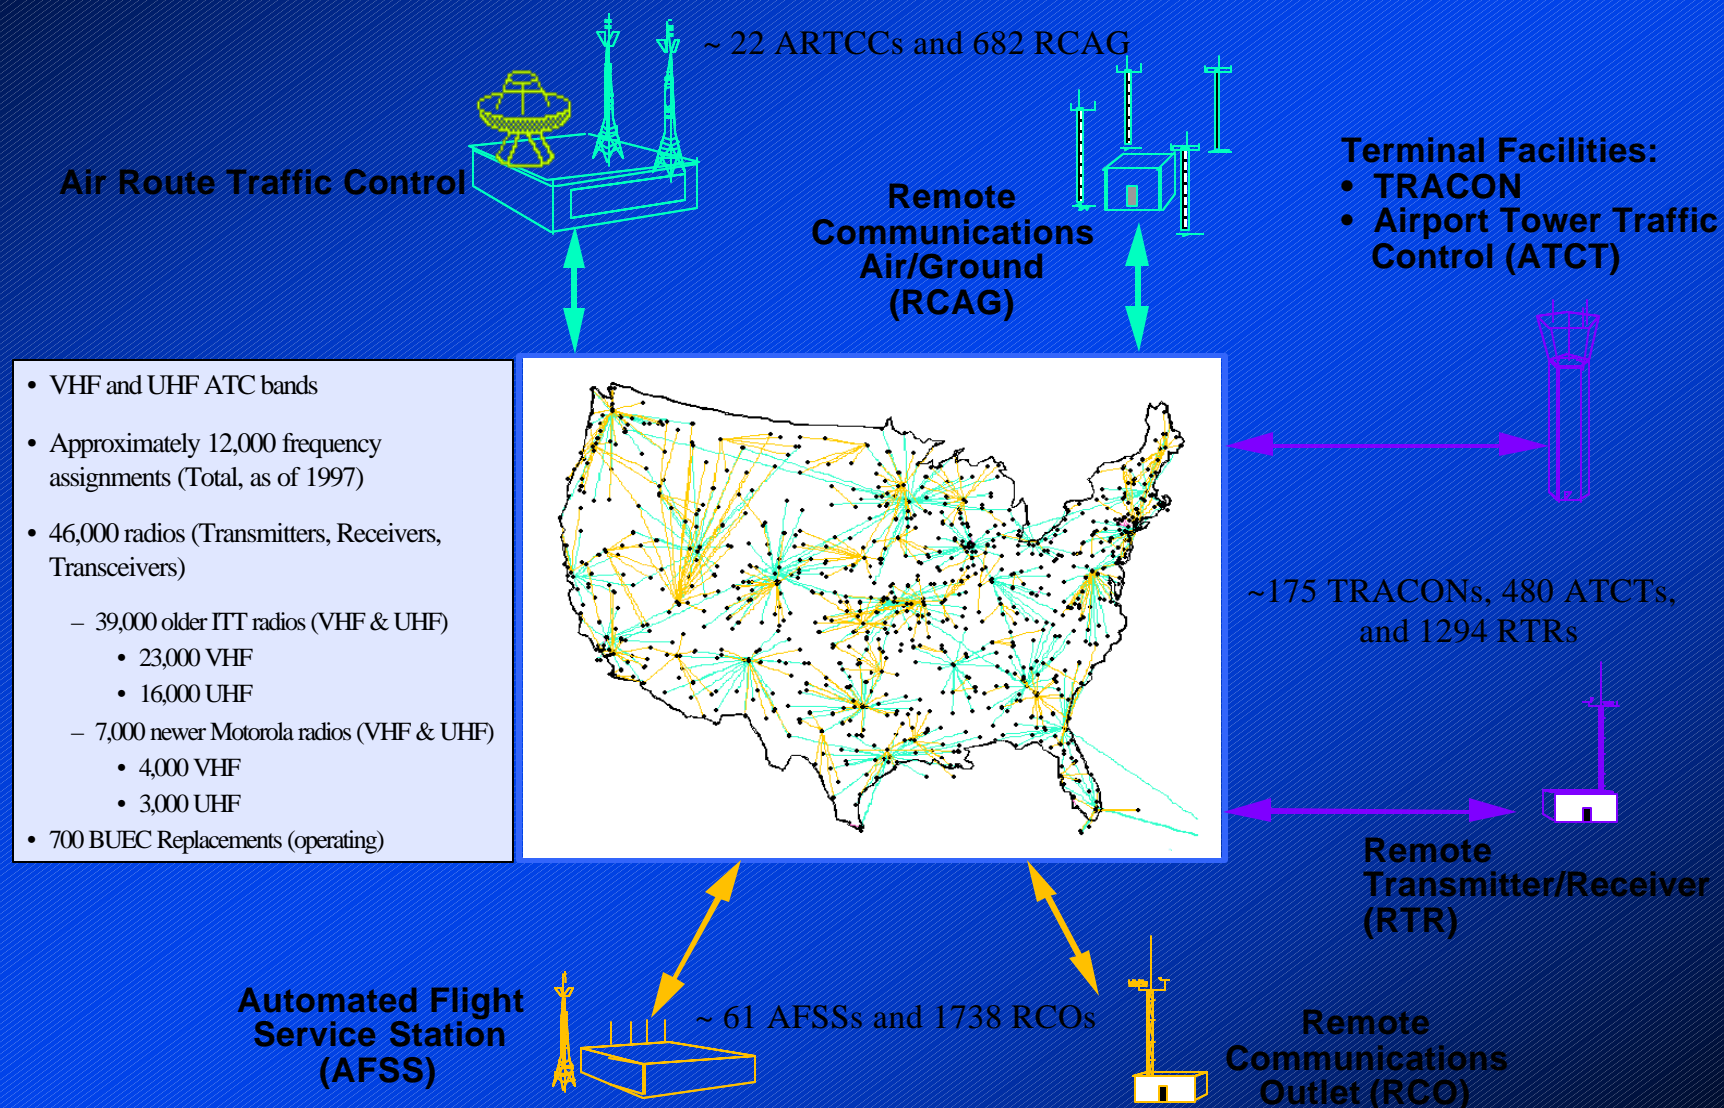

# Current FAA Radio Infrastructure

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

# Frequency Map: Atlanta Center

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

NOTE: each sector has a frequency protected VHF assignment

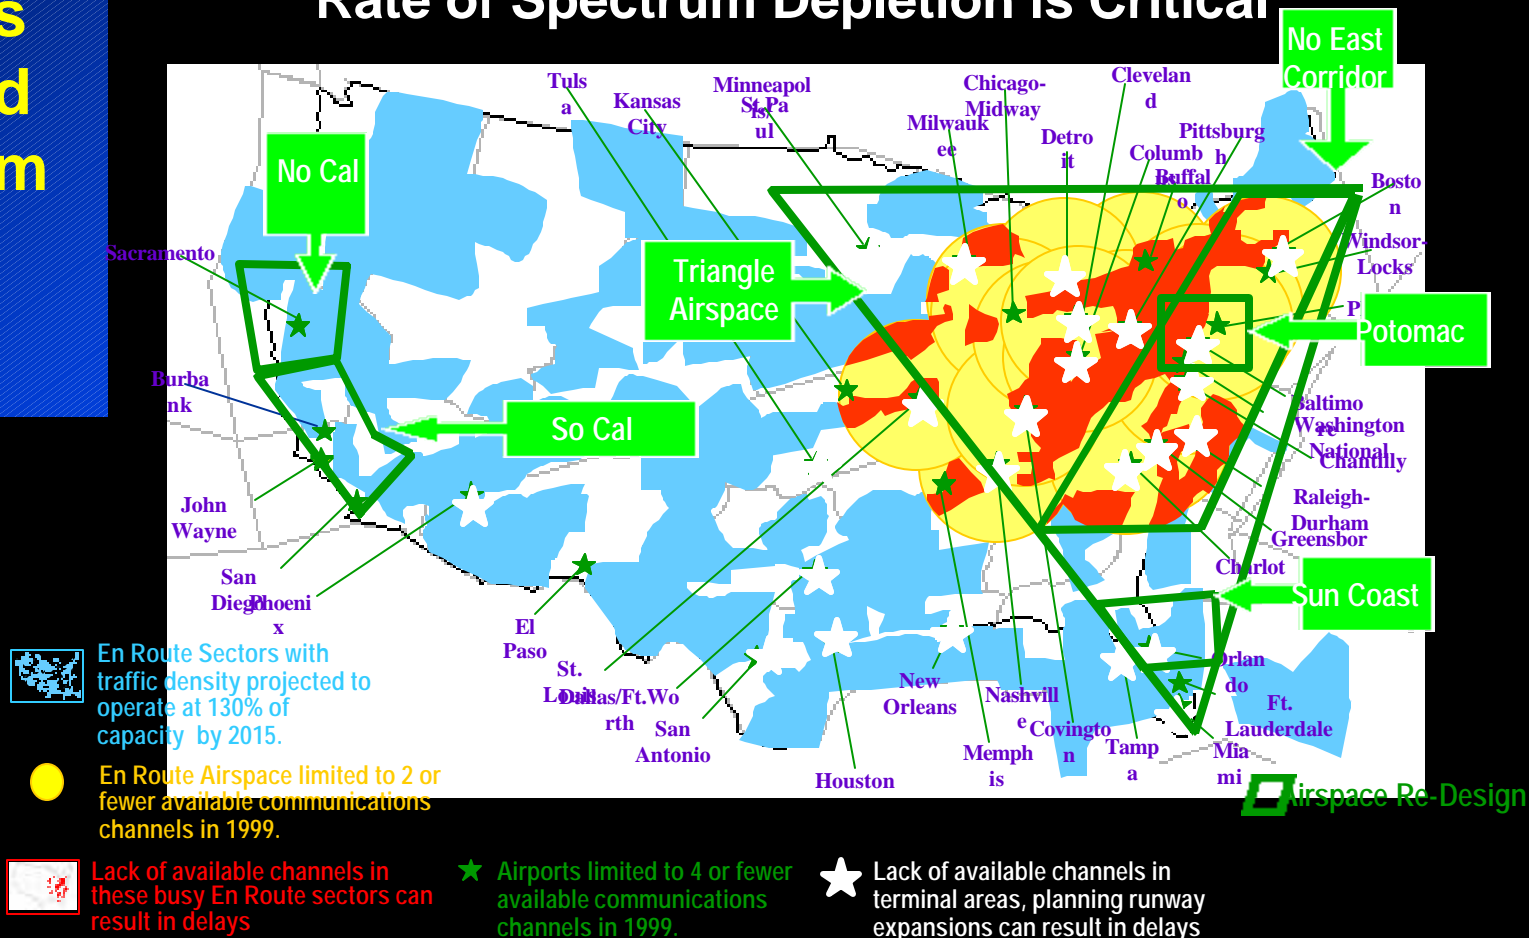

# Running Out of Spectrum...

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

The end is  
2010. Need  
a long-term  
plan.

## Rate of Spectrum Depletion is Critical

2015 En Route Traffic Projection with Current VHF Communications Channels

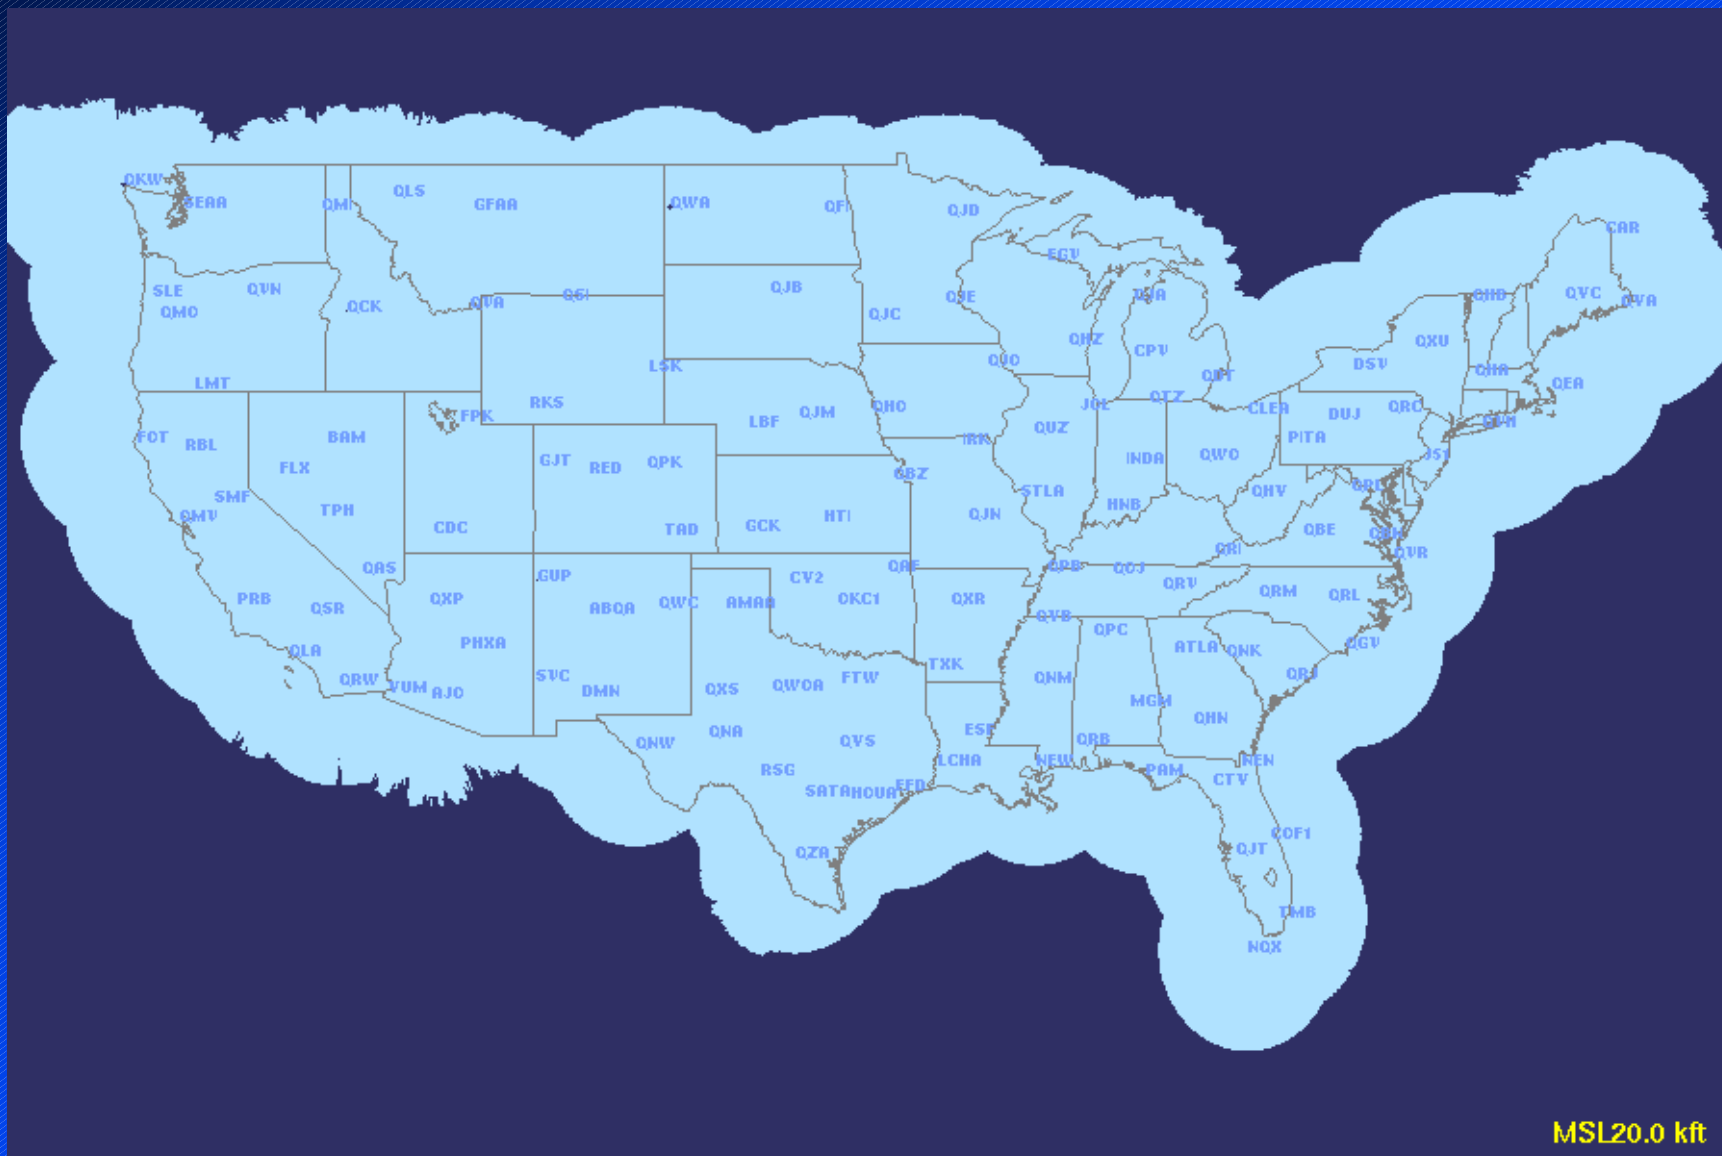

# FAA CONUS En-Route Radar Coverage (@ FL 200)

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

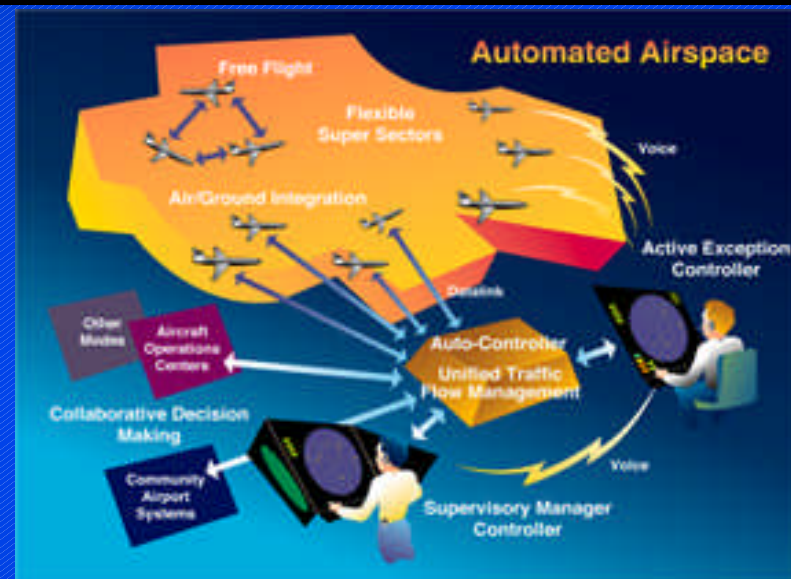

# ATC: Now and in the Future

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

Tomorrow... strategic management of the airspace with aircraft self-separation and air - ground collaborative decision making - *an integrated, scalable approach*

Today... highly compartmentalized radar surveillance and control of aircraft separation - *a hierarchical, self-limiting approach*

# A Revolutionary Approach to ATM

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

Robust, global systems  
Precision approach to every runway in the U.S.  
System-wide information sharing

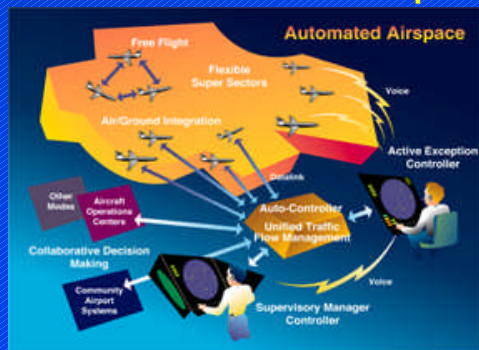

Distributed & High  
Capacity Infrastructure

Advanced, Global Communication,  
Navigation & Surveillance

Closely spaced aircraft takeoff and landing  
Reconfigurable runway/taxiway  
Automated zero visibility surface movement  
Small airports integrated into the NAS

ATM Automation Concepts

Integrated, strategic management of the airspace  
Aircraft self-separation  
Collaborative decision making

# CNS Modernization Plan

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

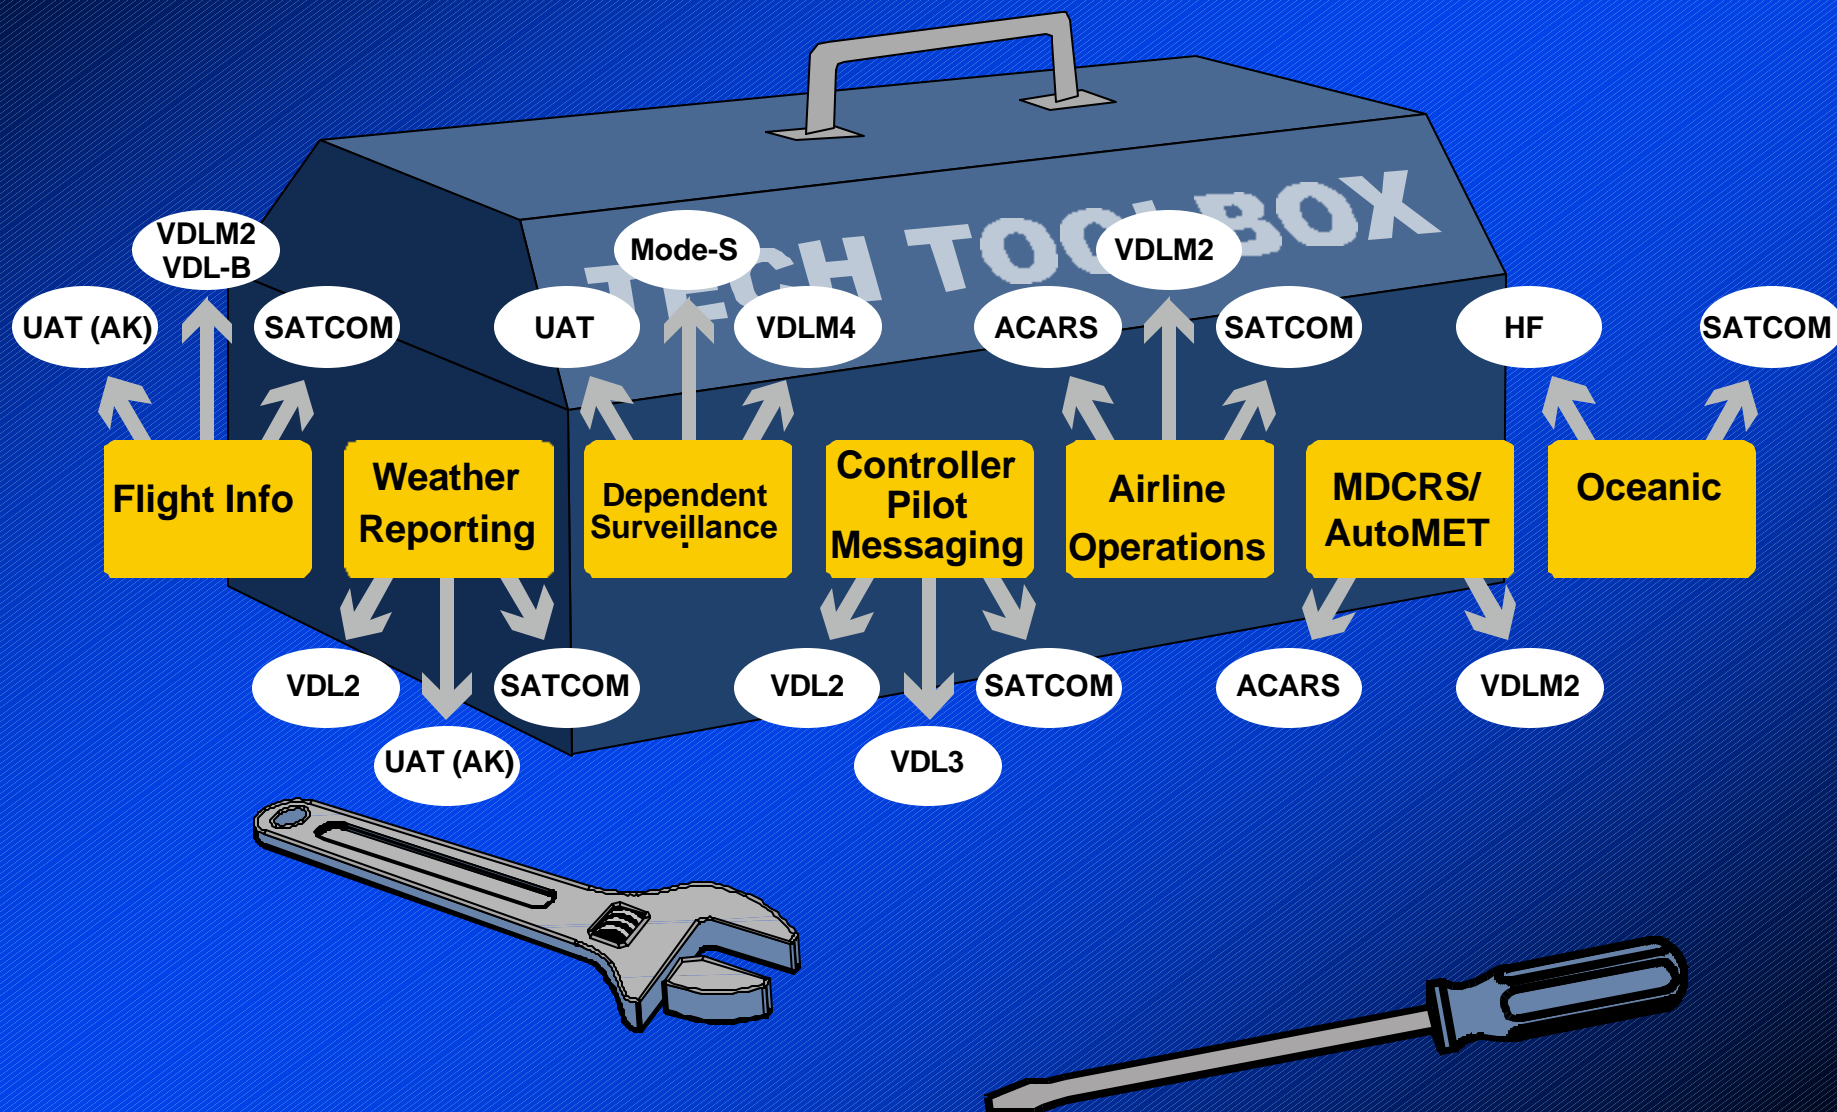

- Modernization Plans:
  - Communications:
    - Migrate to digital VHF voice & data (2010 and beyond)
  - Navigation:
    - Migrate to GPS (with augmentation systems for integrity)
    - GPS primary not sole means of navigation
  - Surveillance:
    - Migrate to dependent surveillance (vs. independent today)
    - Aircraft broadcast state information (position, velocity, etc...)
- However, the debate on the 'right' future CNS Architecture continues...
  - Comm: VDLM3, 8.33, AM + VDLM2, Satellite-based ???
  - Nav: GPS primary, sole-means, LORAN/other back-up???
  - Surv: Dependent: Mode S, UAT, VDLM4 ???
    - Keep independent surveillance radars ???

# CNS Technology Stove Pipes

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

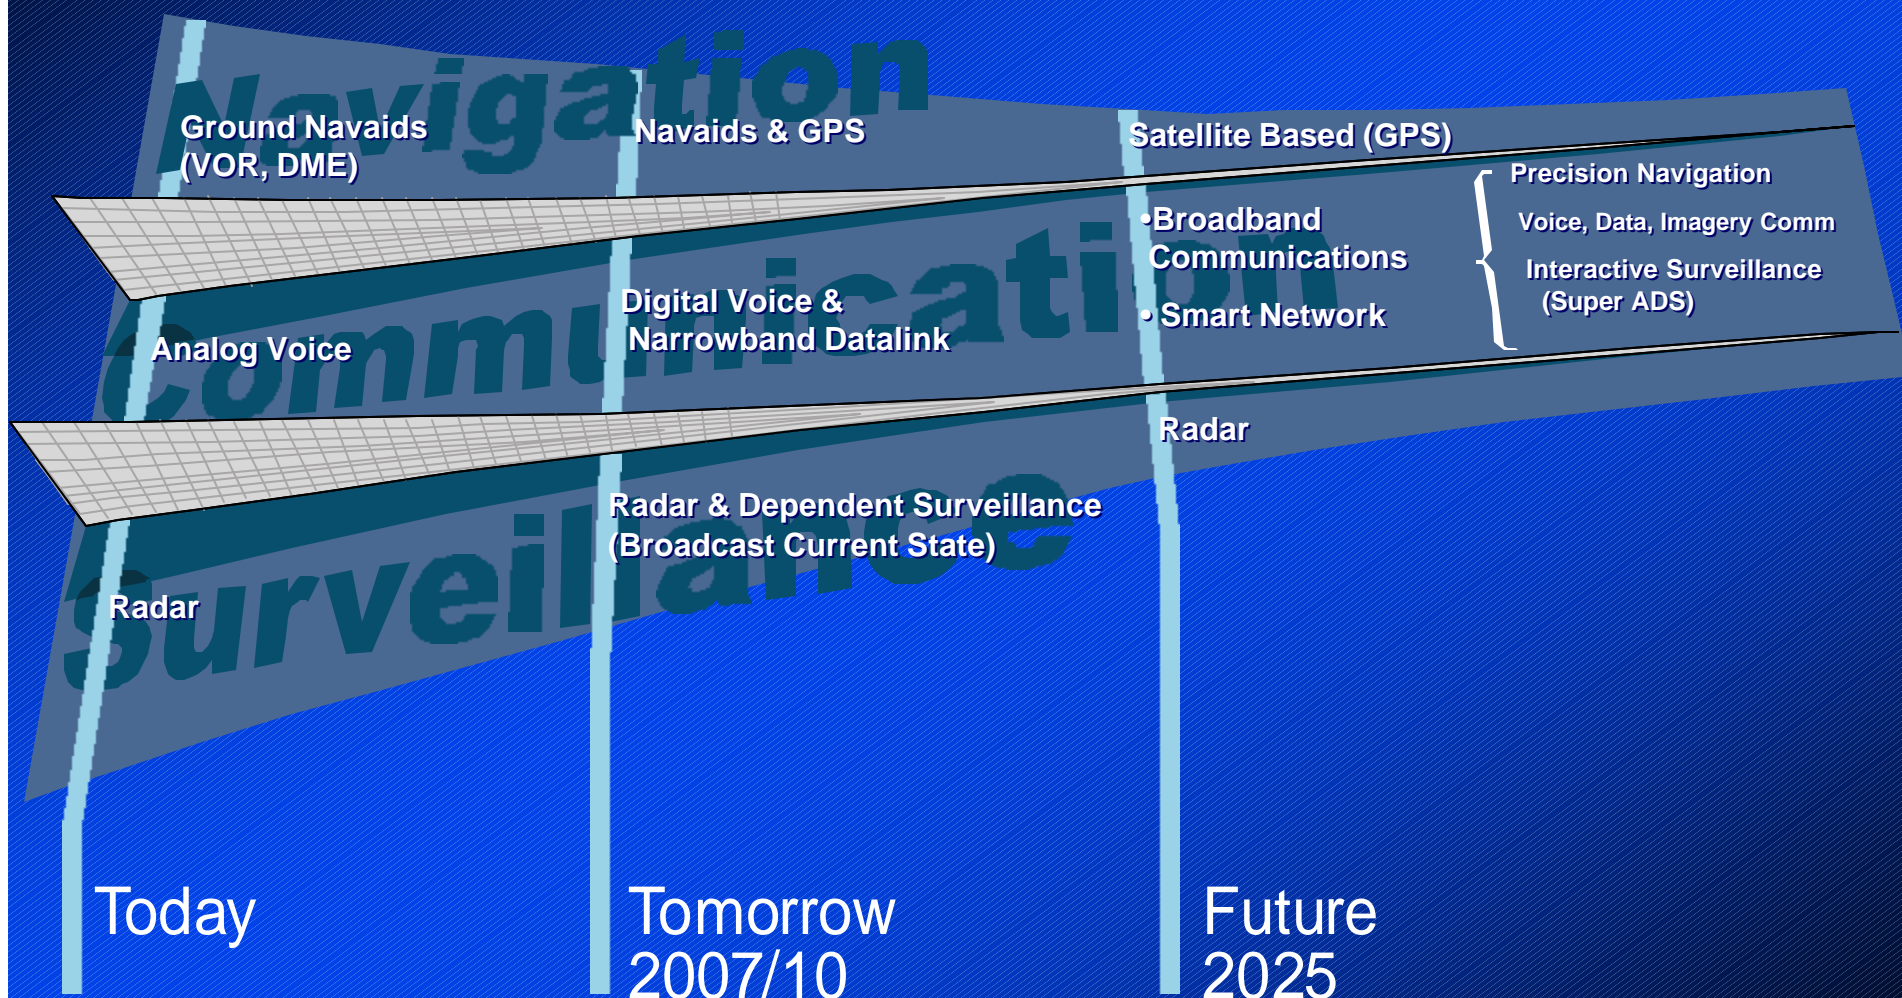

# The Vision: Integrated 'C'Ns

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

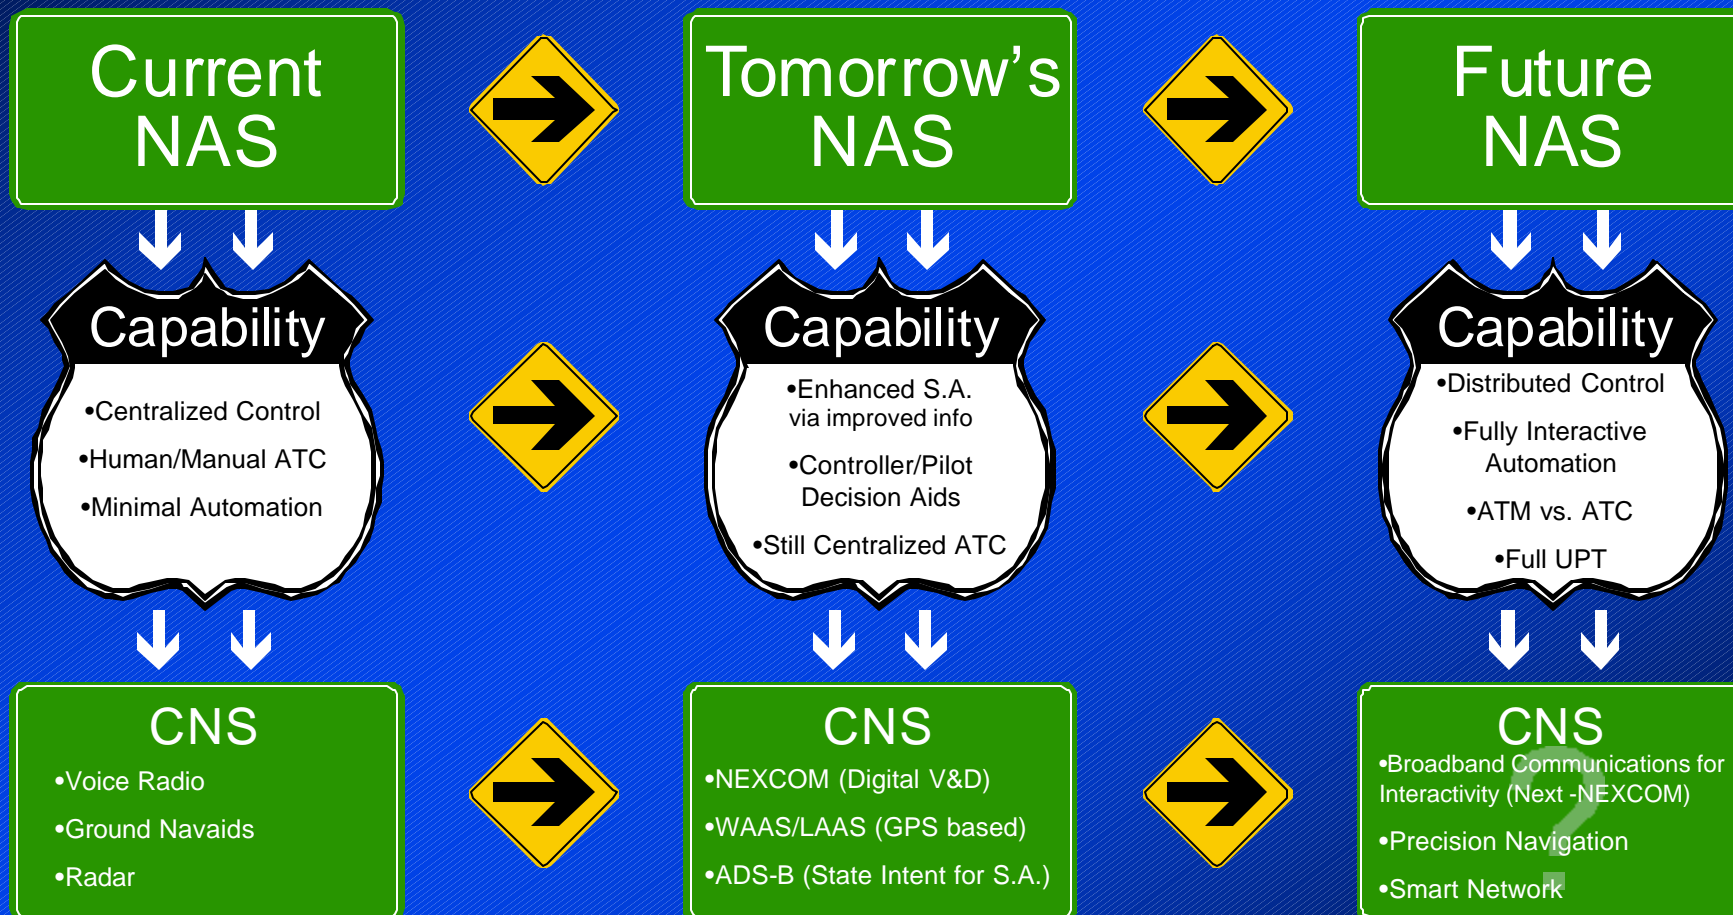

# The Roadmap

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

# Hybrid Integrated CNS Architecture

2<sup>ND</sup> Integrated CNS Conference and Workshop

April 30-May 2, 2002

## Satellite-based:

### Tomorrow:

- “Big Picture” information
  - National Wx, FIS, TIS..
- Broadband broadcast

### Future:

- Medium-rate return link
- Addressed info (aircraft state, security..)
- Affordable avionics ???

## Ground-based:

### Regional info

- Local Wx, FIS..
- Terminal area / airport ops via high-rate 2-way links
- Precision nav & surveillance

### Back-up national

- Narrowband VHF for emergency comm
- Independent nav & surveillance

National/Global Interoperability and Networking
